electronica China takes place separately from 2021 onwards.

** Figures include numbers of productronica China and eelectronica China.

Accelerating Innovation

At the beginning of the 14th "Five-Year Plan" period, smart electronic manufacturing sees new opportunities

In the "14th Five-Year Plan", intelligent manufacturing has been given priority. With the combination of favourable national policies and the continuous advancement of new technologies, e.g. 5G, cloud computing, AI (artificial intelligence), and IoT (Internet of Things), the application of smart technology in the manufacturing industry upgrade has accelerated. In answer to the national policy, productronica China will focus on important technologies as surface mounting, advanced packaging and component manufacturing, dispensing and bonding, electronic assembly automation, test and measurement, wire harness processing, robotics and intelligent warehousing. The exhibition will offer a complete display of innovative smart manufacturing solutions for major applications in the electronics industry.

The very first show of the Asian electronics manufacturing industry annually: a platform for innovative products and technology

Every March, productronica China stages an annual event of the intelligent electronic manufacturing industry that is highly accredited by industry professionals and the media. The exhibition gathers different media and high-quality industry resources, and provides high-caliber professional press services for new product and technology releases. It aims to build a base for new product releases for the electronics manufacturing industry, and a compass that directs to the future of the industry.

High-level decision-makers invited to procure on site

More and more high-level decision makers are now seeing productronica China as one of the most important industry events. They gather in Shanghai every March to look for innovative technologies and industry trends, on which basis they make annual procurement plans. Besides industrial electronics, automobiles, consumer electronics, medical care, communication systems, and military industry, professional visitors from emerging application fields such as security electronics, lighting electronics, new energy, and the Internet of Things are also invited. Exhibitors will have opportunities to meet and talk to more high-level decision makers and strike new deals.

Meet experts at forward-looking accompanying programs

Along with the 3-day trade show, a series of industry forums, technique competitions and award ceremonies will be held. Experts from the electronics manufacturing, application and research facilities, technical experts, and scientists will answer questions, share experiences, and provide advanced technical solutions and industry forecasts on hot topics such as automation, surface mount, post-assembly, advanced packaging and component manufacturing technology, flexible electronics, dispensing and adhesive technology, wire harness processing, etc..

Smart factories in the exhibition hall

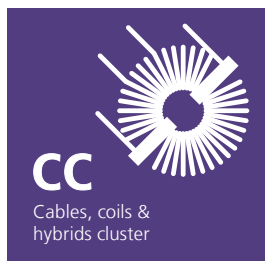

Driven by the "Industry 4.0" and "Made in China 2025" initiatives, China's manufacturing industry as a whole is undergoing rapid transformation and upgrading towards intelligent manufacturing. How to build smart factories capable of intensive, reliable and complex production that is variable in both variety and batch size, and are more research-oriented? productronica China presents a complete SMT production line onsite, including intelligent warehousing, surface mount welding, plug-in welding, optical inspection, electrical performance inspection, robot assembly, and factory data collection.

THE SIX ELEMENTS OF ELECTRONICS DEVELOPMENT AND PRODUCTION.

SMT cluster

Surface mount technology, welding, test and measurement/quality assurance, automatic electronic assembly, production logistics and material-flow technology

Cables, coils & hybrids cluster

Manufacturing technologies for cable and connectors, coilware production and hybrid component manufacturing

Electronic manufacturing automation cluster

Industrial robots, motion control, drive technology and other production subsystems, smart warehousing

Soldering & dispensing cluster

Soldering, gluing, dispensing, coating equipment, and other soldering/joining technologies for PCBs, surface finishing, cleaning

EMS cluster

Electronic manufacturing services (EMS)

Future production / smart factory cluster

SIP, flexibility and printing electronics, digital factory

PARALLEL EVENTS

As Asia's largest trade show for lasers, optics and photonics, LASER World of PHOTONICS CHINA has always taken a leading role in the industry and showcased its entire spectrum in four categories: Laser Systems for Production Engineering, Lasers and Optoelectronics, Optics and Manufacturing Technology for Optics, Imaging and Optical Metrology. From fundamental research to industrial applications, LASER World of PHOTONICS CHINA dedicated itself to the development and innovation of all fields in the industry, providing you with the best platform for finding solutions in light.

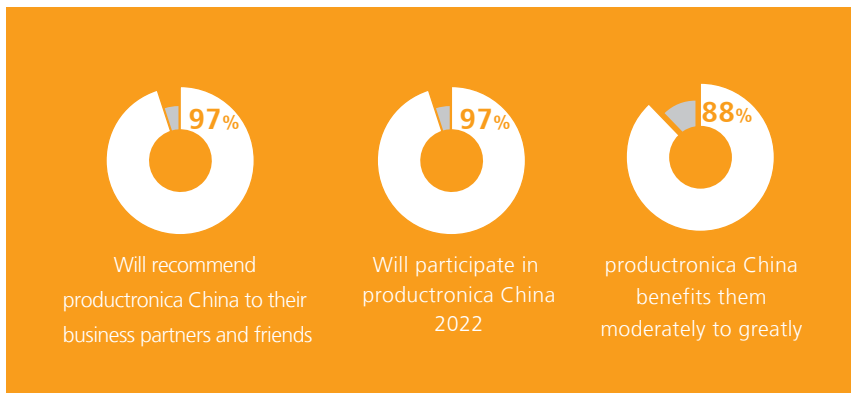

world-of-photonics-china.com

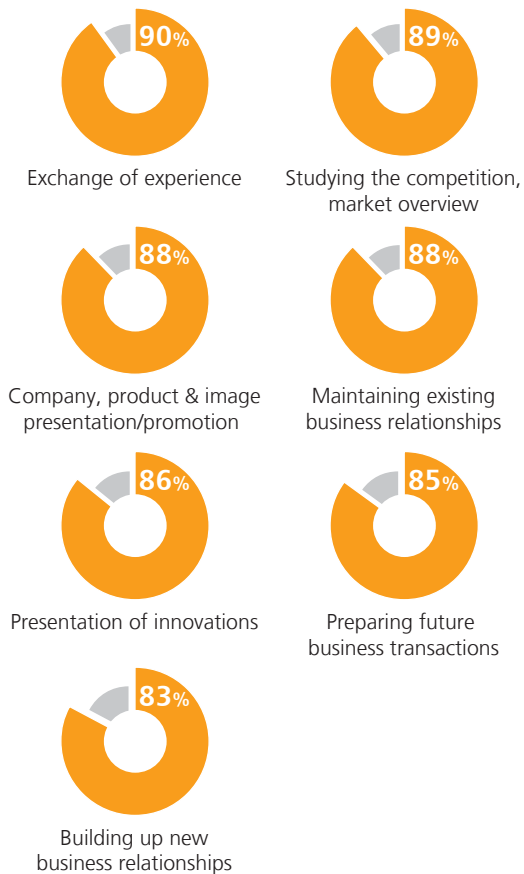

As industrial manufacturing becomes more intelligent, the machine vision technology is becoming more and more important. VisionChina (ShangHai) is a large, professional and influential machine vision exhibition covering all the core and peripheral machine vision components such as smart cameras, IC boards, software packages, image processing systems, and integrated machine vision modules. The exhibition brings together the new products, technologies, applications and solutions in electronics, semiconductors, quality packaging inspection, machine automation, food, medical, rail transportation and many other fields.

SATISFIED EXHIBITORS.

Kirby Zhang, General Manager-State Business Sector, Europlacer (Shanghai) Co., Ltd.

productronica China is a platform we value very much. We have cooperated with the organizer for many years and have taken part in almost every session. productronica China is very suitable for us and provides a good opportunity for product exhibition. The overall impression this year is that it is very successful, with a large number of visitors and a comprehensive range of exhibits. The organizer's service is very attentive, and our cooperation is very smooth. We are just like family. Next year, we will continue to participate in productronica China, and we thank the organizers again for their help.

Jinzhong Song, Deputy Director, Tokyo Juki International Trading (Shanghai) Co., Ltd.

This is the first time we participated in productronica China. Through the show, we have obtained a lot of valuable information. We hope that through the exhibition, we can introduce our high-quality automation equipment to customers from all over the country and the world, and thus to promote the Chinese and global markets. We will definitely continue to participate next year and continue to cooperate with productronica China.

Sean Rong, Managing Director Komax China, Komax (Shanghai) Co., Ltd.

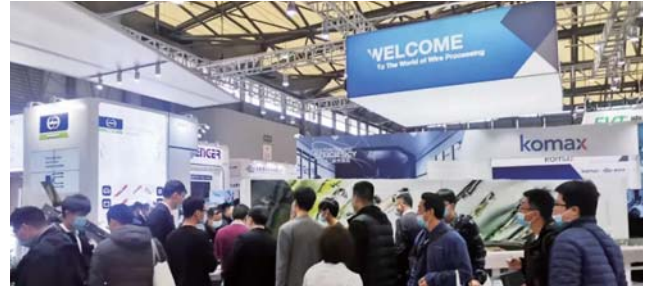

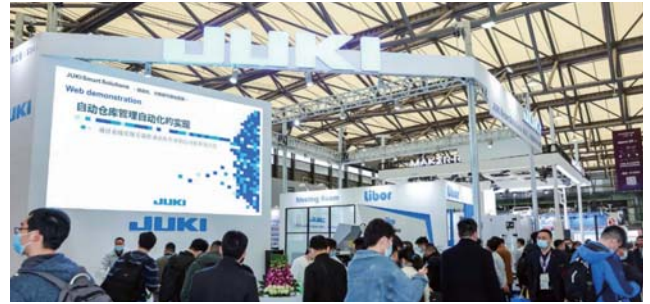

We are an old friend of productronica China. Overall, we are quite satisfied, and as usual, we will participate in the exhibition next year.

Toby Wang, Industry Manager for SEMI&PV, Beckhoff Automation (Shanghai) Co., Ltd.

We will continue to participate in productronica China next year. The electronics industry in China is constantly improving, and high-end technology has been used by major electronics manufacturers. We also hope to introduce advanced German technology into China through productronica China, and to help Chinese electronics manufacturers improve their technological level. In this way, we can communicate and benefit from each other.

David Chen, Greater China Sales Director, Advanced Assembly and Elastomer, Dow Consumer Solutions

We will continue to participate in productronica China. It is an inclusive, professional and high-end platform. We can meet many target customers here, and the customers can also get to know our products. At the same time, we can meet many friends in the industry, and we can find out the trend of the industry through exchanges with them. Since COVID-19 broke out, the exhibition we have taken part in is productronica China, apart from the CIIE. It is a very good platform.

Huazhen Song, Technical Communication Manager, B&R Industrial Automation (China) Co., Ltd.

We have participated in productronica China for many years. Our company has been in the electronics industry for many years, and we want to continue to expand our advantages by participating in the exhibition. In addition, productronica China is a major exhibition of the electronics manufacturing industry, with a large flow of high-quality visitors.

Kenny Chen, Sales Supervisor of Plastic Bonding Adhesives, South China, Nordson (China) Co., Ltd.

productronica China impressed us as a very professional exhibition. The show covers the entire industry chain of the electronics industry. Through the show, we have more opportunities to communicate with peers and customers. At the exhibition, we can learn about new developments and new information in the electronics industry through exchange with our customers and friends. We can not only meet many old friends but also make many new friends here. Nordson has been a "loyal customer" of productronica China for more than ten years, and we will continue to support productronica China and grow together in the days to come.

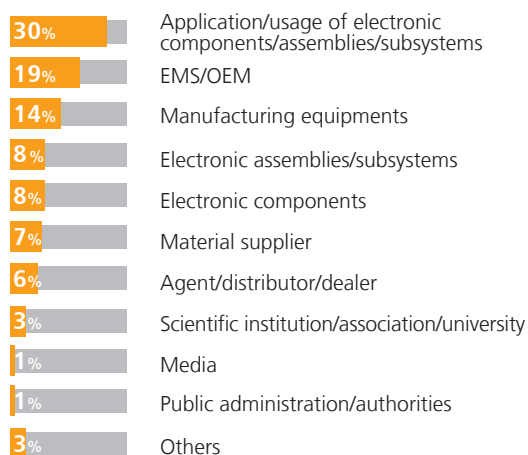

Guo Chen, Key Account&HMV Director, Hexagon Manufacturing Intelligence

We have participated in productronica China for many years, and we have always given the fair a high praise. This is an exhibition that is both professional and representative of cutting-edge technology. For exhibitors, we are very willing to participate in such exhibitions where there are more advanced technology and professional visitors. Through productronica China, we can promote new technical solutions to the market, and expose our brand image to more customers.

SATISFIED VISITORS.

Sun Kong, Specialist, Quanta Shanghai Manufacturing City Tech-Front (Shanghai) Computer Co.Ltd.

I think in terms of scale, productronica China is one of the biggest exhibitions in the electronics industry. It covers a relatively complete range of manufacturers, and many new equipment are exhibited here. In terms of service quality, the organizer is very good at its job and is very considerate. The number of exhibitors and visitors has increased, and the organizer's service is also very helpful.

Hao Lu, Process Management, (AVIC) Shanghai Aviation Electric Co., Ltd.

The show is very rewarding, and it offers directions and blueprint to us in the building of a digitalized factory, as it covers everything from advanced smart warehousing logistics and digital transformation solutions, robotics and other high-quality technologies and solutions, to wire harness processing equipment, automatic dispensers and other basic unit equipment that constitutes an intelligent production line. By learning from leading exhibitors, we now know a lot about how to develop solutions for releasing production capacity and improving product quality. In all, our visit is very helpful to the development of the company and to us personally.

Shuqing Li, Director, Technical Center, Shanghai Sharetek Technology Co., Ltd.

productronica China is huge, and the platform provides visitors with new technologies and exhibitors. We are especially happy to see the rapid progress of domestically developed technology. Among them, the equipment exhibited by FACC is the most impressive. The exhibits from foreign companies such as FUJI, YAMAHA, and Panasonic still showed strong technical advantages.
